

## BCT ME10-Manager

**Module for the integration of OneSpace Designer Drafting / ME10 into the Teamcenter product lifecycle management (PLM) system**

In order to support a controlled migration from OneSpace Designer Drafting / ME10 to a new CAD system and Teamcenter the safest approach is to import this data into Teamcenter so that it is available for future use. The advantages are that all of the data is in a single system and under a single development process. This capability removes many of the barriers for migrating the existing ME10 data that would typically slow down the implementation of a new CAD system.

### **Basic functionality:**

- complete integration of the OneSpace Designer Drafting/ME10 data base into the Teamcenter data structure (e.g. for number generators and attribute mapping)
- creation of new items, search over all Teamcenter attributes with preview, load, save
- load options support partial loading based on the OneSpace Designer Drafting/ME10 part structure
- automatic conversion of DXF and IGES for load and save
- OneSpace Designer/ME10 part structure can be used to create bill of materials
- batch import of OneSpace Designer Drafting/ME10 data into Teamcenter
